

I am against the NAB petition 04-160. I believe that subscription radio listeners should have access on subscription radio to local weather and traffic. I do not think I should be coerced to listen to commercials, inane DJ chatter to be able to access information that I need to make decisions on my route to work, choice of protective clothing, etc. that improve my safety. Traffic and weather reports should be protected by free speech laws, as well as recognized for the safety and well being service they provide community listners. Subscription radio should not have restrictions to this content and should be allowed to offer comptetive broadcasting with free radio.
